

Trend Micro Mobile Security

Trend Micro Mobile Security extends protection beyond PCs to secure mobile devices and data stored on them. This solution helps organizations reduce costs by providing a single point of visibility and control for device management. It helps prevent data loss by enforcing the use of passwords, encrypting data, and remotely wiping data off lost or stolen devices.

Advantages

- **Threat Protection**
 - Malware ● Spyware ● Web Threats
- **Reduced Operational Costs**
- **Limit Data Loss**
- **Reduced Security Risk**

Trend Micro SafeSync for Enterprise

Trend Micro SafeSync for Enterprise provides file sharing and sync capabilities with data protection to give IT managers stewardship of sensitive data. Deployed both on the premises and in a private cloud, enhanced data protection features such as DLP, persistent file encryption and document tagging provide unprecedented data protection while still enabling user productivity with integrated file sync and share capabilities. Combine control with cost savings by deploying the solution on your own infrastructure. SafeSync for Enterprise complements your overall mobility and data protection from Trend Micro to increase the value of DLP throughout your organization.

Features

- File sharing from anywhere, any devices
- Sophisticated data protection
- Visualize and control information assets

Advantages

- **Maximize Data Protection for Synchronized Files**
 - Control where sensitive corporate data resides and how many copies exist
 - Tag and safeguard sensitive data to reduce risk and achieve compliance mandates
 - Apply data loss prevention (DLP) to mobile data and set policy based on data sensitivity
- **Maintain Productivity Gains without Inhibiting Collaboration**
 - Allow users to simply drop a file into a folder for automatic replication to specific folders in the cloud, and on other PCs and devices
 - Free up mail server storage with a Microsoft Outlook plug-in that sends a sharing link instead of attaching files to email messages
- **Improve Security and Lower Costs with an Onsite Solution**
 - Retain ownership and control of data sharing by deploying on premise private cloud
 - Lower your risk exposure to data loss or compliance violation with detailed audit and log information
