

InterScan Web Security Virtual Appliance

Given today's advanced Internet threats and the growing use of cloud-based consumer applications in the workplace, application visibility is essential to understanding network risks. The InterScan Web Security virtual appliance combines application control with advanced anti-malware scanning, real-time web reputation, and flexible URL filtering to provide superior Internet threat protection.

Advantages

- Get instant visibility and control with Advanced Reporting and Management
- Stop web threats before they penetrate the perimeter
- Lower your TCO
- The integrated Data Loss Prevention protects sensitive data

InterScan Web Security as a Service

InterScan Web Security as a Service dynamically protects any user, in any location, on any device. And because it's hosted in the cloud, you don't need to buy, manage, or maintain software or hardware. Furthermore, this solution is flexible and will grow with your business.

Advantages

- Delivers superior protection on any device, anywhere
- Gives users freedom while you maintain visibility and control
- Provides simple but powerful management and reporting
- Maximizes the cloud advantage - cost effectiveness and flexibility
